Hi Ojus

Thank you for your interest in Levich Solutions Pvt Ltd. As part of our evaluation process, we'd like you to complete a technical task. Please find the details below.

Frontend Challenge: The Infinite File Manager

The Scenario: We need to build a web-based file explorer. Your task is to build a React (or relevant framework) application that visualizes and manages an N-level deep file structure.

1. Core Requirements & UI Layout

- **Sidebar (The Tree View):** An expandable/collapsible N-level deep directory tree.
- **Main Content Area:** Displays the contents of the currently selected folder. The user should be able to toggle this area between:
 - **List View:** A detailed table (Name, Type, Date Modified).
 - **Card/Grid View:** Icon-based grid layout.
- **Color-Highlighted Hierarchy:** The Tree View must clearly show parent-child relationships using color coding. As a folder goes deeper (N-levels), its background, text, or connecting border color should shift to visually represent its depth (e.g., Level 1 is dark blue, Level 2 is medium blue, Level 3 is light blue, etc.).

2. Functional Requirements

- **Navigation:** Clicking a folder in the tree or main view opens it.
- **CRUD Operations:** Users should be able to:
 - Create a new File or Folder inside the current directory.
 - Rename an item.
 - Delete an item.
- **Search:** A search bar that filters files globally. If a deeply nested file matches, the UI should show it and allow the user to see its path.

3. Technical Constraints

- **No Backend Required:** Keep all state in the browser's memory (using Context, Redux, Zustand, or just React State). You do not need to persist data to a database.
- **Mock Data:** Assume the initial data comes in as a deeply nested JSON object (or a flat array of objects with parentIds—you decide how to structure your initial state).

4. Deliverables

- A link to the deployed application (Vercel, Netlify, etc.).
- A link to the public GitHub repository.

Please ensure you 'Reply All' when responding to this email. Good luck!

Best Regards,

Grace Sara Varghese
