

Hi Ojus,

The Assignment

We have prepared a realistic scenario called "Operation Clean Room." You will step into the shoes of an engineer tasked with cleaning messy revenue data across multiple billing systems and building a board-readiness dashboard. The repository contains all the context, data, and boilerplate you need to get started.

Repository: <https://github.com/aditya-ambrstack/assignment>

How to get started:

1. Fork the repository to your GitHub account.
2. Clone your fork locally.
3. Run `pnpm install` & `pnpm dev` to verify the environment.
4. Review `README.md` and `docs/CFO_BRIEF.md` for your full brief.
5. Refer to `SETUP.md` if you encounter any issues.

Submission:

- Push your work to your forked repository.
- Share the link with me once you are finished.
- Ensure that `pnpm install` & `pnpm dev` starts both the backend and dashboard cleanly.

Timeline: 48 hours from receipt of this email. This project is intentionally scoped larger than what can be completed perfectly; we prefer to see a few features implemented thoroughly rather than a superficial completion of the entire task. Please prioritize based on your judgment.

Key Points:

- Data Quality: The data is intentionally messy. Identifying and handling these issues is a core part of the assignment.
- Documentation: Document your assumptions in `docs/ASSUMPTIONS_TEMPLATE.md` and complete the architecture document at `docs/ARCHITECTURE_TEMPLATE.md`. Your decision-making process is as important as your code.
- Testing: There are seven failing tests in the repository; resolving these is part of the task.
- AI Tools: You are encouraged to use AI tools (Claude Code, Copilot, ChatGPT, etc.). We evaluate your judgment and decisions. Please ensure you can walk through your code and explain your choices during a subsequent live session.

If you have questions regarding the setup, please feel free to reach out. For questions regarding requirements, please use your best judgment and log your assumptions as part of the evaluation.

We look forward to seeing your approach.

Best ,
Addy
